Projects

Pick Me Up
A mobile application aiming to facilitate users wanting to send packages via any postal service provider across the country.
- Implemented using Android Studio with Java and using Firebase Firestore for the backend.
- User have to create an account to access key features of the app such as making a request to have packages picked up at a desired location.

Fab Lab Notification System
Work with a group of three to incorporate a notification alert system displaying relevant information for Fab Lab UTA users.
- Developing a web application using HTML/CSS and JavaScript for the front end
- Implementing fundamentals of software development by creating UI prototype, analyzing system requirements, testing the code, and presenting project to a client.

Belle Diva Hair
Website use to sell high quality hair products at affordable price.
- Creating using HTML/CSS for the frontend and Node.js/Express/MongoDB for the backend.
- User will be able to create an account, sign in, and add items to shopping cart in order to purchase products.

Weekly Meal Plan
Application used to build weekly meal plan using database and user input.
- Designed with C++ and GUI, user can create, add, delete and save recipe into meal plan database.
